

What is Claimed is:

1. A rack for holding containers comprising:  
a base having a front side and a back side; and,  
at least one pair of opposed resilient arms extending from the base front side,  
5 the arms having a first position for resiliently engaging a container.
2. A rack according to claim 1 further comprising an adhesive on the back side  
of the base.
- 10 3. A rack according to claim 1 further comprising at least one hole formed in  
the base for receiving a fastener selected from the group consisting of a nail, a screw, a  
bolt, a tack and a rivet.
- 15 4. A rack according to claim 1 further comprising the resilient arms having  
spaced apart distal ends, and the resilient arms having a second position for receiving a  
container between the spaced apart distal ends.
- 20 5. A rack according to claim 1 wherein the at least one base comprises a  
plurality of base sections defined by notches in the base, and the at least one pair of  
resilient arms includes a pair of resilient arms extending from each base section.
6. A rack according to claim 5 wherein the base sections are separable.

7. A rack according to claim 1 wherein the rack is formed of a polymeric material.

8. A rack according to claim 1 wherein the rack is formed of a metal.

5

9. A rack according to claim 1 wherein the rack is a molded material.

10. A rack according to claim 1 wherein the pair of resilient arms are curved.

10

11. A rack according to claim 1 wherein the base further comprises a magnet.

12. An array of racks comprising:

a plurality of individual racks arranged in a plurality of rows and columns,  
each rack including a base having a front side and a back side, and at least one pair of

15

opposed resilient arms extending from the base front side, the arms having a first position  
for resiliently engaging a container, and,

a beveled portion adjacent each row of racks and operable to separate each  
respective row and column from at least one adjacent row of racks.
